## How to Understand Your Electricity Bill

We want your bill to be clear and easy to read. Here's a quick guide to help you understand the main sections:

### Account Information

At the top of your bill, you'll see your account number, name, statement date, delinquent after date (due date), and the total amount due. If payment is not received by the due date, you'll also see the amount due after the due date, which includes any applicable late fees. If you are enrolled in automatic payments your bill will show "Payment drafted". Please review this information carefully.

### Important News

Important information that your Cooperative wants you to be aware of on a monthly basis.

### Current Charges Summary

This section includes previous balance, payments, current charges and amount due. The amount due includes any previous balance and new charges, minus payments.

### KWH Usage History and Temperature

This chart compares your monthly KWH consumption for the past twelve months.

### Charge Descriptions

This section provides a breakdown of the charges that make up your total bill. Common charges may include:

- **Facility Charge** – A fixed monthly charge that covers the cost of maintaining meters, service lines, and account services.
- **Energy Charge (per kWh)** – The cost of the actual electricity you use, calculated by multiplying your total kWh by the approved rate.
- **Demand Charge** – For applicable accounts, this charge is based on the highest level of electricity demand (usage at one time) during the billing period.
- **PCA (Power Cost Adjustment) Charge** – An adjustment that reflects changes in the cost of purchasing or generating electricity. This amount may increase or decrease annually.
- **EEAC (Energy Efficiency Adjustment Clause) Charge** – A charge that supports energy efficiency programs and initiatives.

### Readings and Billed Usage

- **Previous Reading** – The meter reading from your last billing cycle.
- **Current Reading** – The most recent meter reading.
- **Billed Usage** – The total kilowatt-hours (kWh) used during the billing period.

This is calculated by subtracting the Previous Reading from the Current Reading.

Some meters have a multiplier. If your meter has a multiplier, your billed usage is calculated like this: **(Current Reading- Previous Reading) x Multiplier**.

If a multiplier applies to your account, it will be shown on your bill.

**Charges**

A detailed list of charges for the current billing statement that include the facility charge, energy charge, PCA, EEAC and tax.

**Service Location**

Where your electric service is located.

If you have any questions about reading your bill or understanding your charges, please don't hesitate to call our office.
